GB-Standard 21260-2007 for Headlamp Cleaner

The GB Standard 21260-2007 specifies the definitions and test requirements of headlamp cleaners used for vehicles for the CCC certification for the Chinese market. This standard is applicable to headlamp cleaners of motor vehicles of categories M and N.

Test requirements according to GB-Standard 21260-2007

The headlamp cleaner shall be tested in accordance with the following requirements:

The cleaning efficiency at the points on the measuring screen, which are specified in the following figure, shall after every cleaning period be at least 70 percent for the passing lamp and also 70 percent for the optional driving lamp.

Measuring Points on a Screen

- The measuring point shall be located as shown in Figure 1, on a screen situated 25 m from the headlamp and perpendicular to its reference axis.
- Measuring points for headlamps approved in respect of the passing beam only: 50 R and 50 V.
- Measuring points for headlamps approved for passing beam and driving beam: 50 R and 50 V, if in the same headlamps different optic systems for the driving lamp and the passing lamp are provided.
- Measuring point for the driving lamp: HV.

Even if a product does not require CCC certification and does not fall under a GB Standard, there is still a chance that problems with customs clearance may occur. To avoid potential problems at customs for products that do not require CCC, we can offer to issue an investigation letter stating that CCC is not needed.

► MPR China Certification GmbH and China Certification Corporation will consult you regarding all GB Standards and support you during the complete certification process

- Straightforward, transparent management of the certification process
- All-inclusive consulting worldwide
- Regular updates and information regarding the certification progress
- Important contacts to all relevant Chinese certification authorities and test labs

Please do not hesitate to contact us for any questions
