GB-Standard 9743-2007 for Passenger Car Tyres

The GB Standard 9743-2007 specifies the terms and definitions, requirements, test methods and markings for passenger car tyres for CCC certification for the Chinese market. This GB Standard applies to pneumatic passenger car tyres.

**Test requirements according to GB-Standard 9743-2007**

The passenger car tyres shall be tested according to the following items:

- Strength test
- Unseating resistance of tubeless tyres
- Durability test
- High speed performance test
- Tyres wear indicator check
- Appearance quality

Even if a product does not require CCC certification and does not fall under a GB-Standard, there is still a chance that problems with customs clearance may occur.

To avoid potential problems at customs for products that do not require CCC, we can offer to issue an investigation letter stating that CCC is not needed.

► **MPR GmbH and China Certification Corporation** will consult you regarding all GB-Standards and support you during the complete certification process

- Straightforward, transparent management of the certification process
- All-inclusive consulting worldwide
- Regular updates and information regarding the certification progress
- Important contacts to all relevant Chinese certification authorities and test labs
